

Press Release

## **COMSOFT to Demonstrate Latest Quadrant Product Updates at ATC Global 2010**

**COMSOFT will be demonstrating the latest developments of its ultra compact Quadrant Sensor at this year's ATC Global Exhibition in Amsterdam.**

KARLSRUHE/GERMANY, March 2010 – Besides the presentation of the sensor itself, the performance monitoring suite QCMS will be on display showing ADS-B and Multilateration (MLAT) data as well as the refined analysing properties integrated in the suite.

COMSOFT offers the complete product range for ADS-B and MLAT based surveillance. The Quadrant family embraces next to ADS-B and MLAT sensors, powerful central controllers and an intelligent interrogator for active Wide Area Multilateration (WAM). A new ground vehicle transmitter, the so-called Midget, rounds off the portfolio.

COMSOFT's engagement in the sensor market evolved from an initial joint undertaking with QinetiQ, the leading international provider of technology-based services and solutions to the defence and security market, which finally led to COMSOFT's taking over of the full rights and responsibilities for Quadrant in early 2009. From then on COMSOFT and QinetiQ agreed to continue their good cooperation in the field of consulting services and military applications.

Visit the COMSOFT booth H216 where our experts will give you a demonstration of the unique Quadrant product family.
